

# Our Dispensers Deliver the Exact Dose Needed to Kill Germs

When the full dose of hand sanitizer is not used, it can overflow from drip trays, creating a potential slipping hazard, and may also damage floor surfaces.

## When using hand sanitizer:

- 1 Take the FULL dispensed dose of sanitizer with a cupped hand
- 2 Rub sanitizer into hands until completely dry
- 3 Do not slap hands together or fling sanitizer onto the floor
- 4 If drip trays become full, notify EVS right away
